

Patronusens® App

Bank application

Banking and working safely and securely

Bank self-service areas are un-attended and small bank branches are often only occupied by a single employee.

In any health emergency case of customers or employees there is no backup person calling the ambulance or police. **Patronusens** detects critical situations like people fall and collapse and releases an alarm.

Security problems caused by loitering people and vandalism in the self-service area are detected by **Patronusens** as well. Additional functions like people counting and queue length measurement can be added.

The **Patronusens** sensor is ceiling-mounted. In case of an incident it releases an alarm message via LAN, W-LAN or mobile network.
