

ConciergeEye

ConciergeEye - Your key to intelligent access control

Technical principle

ConciergeEye recognizes authorized persons "en passant" by their face. It allows authorized persons to simply pass through. Contactlessly, without the need for interaction opens the door all by itself. No key, no ID, no chip card that can be forgotten or lost. Hands free and thoughts free for more important things. ConciergeEye is a compact face recognition unit for every locking system and access control system - inside and outside. The software-hardware component can be easily integrated into your access control system.

Suitable for hotel entrances and receptions, offices, manufacturing, storage, laboratory and operating rooms, computer centers, public buildings, airport sections and many more.

Technical specifications

- Detection distance (each variant) 1 m or 2 m
- Detection angle (depending on variant) 90° or 170
- Easy system integration through flexible interfaces
- Wall mounting fixed and swiveling
- High quality aluminium housing
- Dust and water resistant
- Precision Industrial Camera
- Integrated high-performance computing chip
- Deception detection
- Artificial Intelligence
- No saving of images
- Ethernet and PoE
- Recognition based on anonymized access patterns
- Dimensions:
height 220mm, width 172mm, depth 62mm
- white- and grey-label compatible

ConciergeEye

Integrated face recognition as a system component of Access control systems

We offer a finished product, a system component as add-on for your Access control system. Why we do not only deliver software?

For you this means freedom from software licenses, software integration and server problems. ConciergeEye is plug-n-play!

Our integrated face recognition, a combination of precision industrial camera and artificial intelligence computing unit, provides a service that all software, software and hardware on the market.

Data privacy, non-cloud

We develop, work and live in Germany. The requirements of data protection flow with us into the products. ConciergeEye processes columns of numbers, not Images that are not decodable for third parties. And the Non-Cloud-based! This increases security. ConciergeEye can be accessed via a local network e.g. integrated into your security system via Ethernet.

Detection in natural motion

Just go where your destination is and don't waste any thought on Access authorization. ConciergeEye requires no special positioning in front of the Camera, it recognizes the person when approaching while walking.

No user interaction required

ConciergeEye allows authorized persons freedom of movement. None Card, no chip that has to be taken out. No stop. Just keep going.

ConciergeEye requires a facial pattern of the authorized person, which has been calculated once. After that ConciergeEye works without any interaction.

Deception-proof, more far-reaching, faster, more precise

ConciergeEye works with artificial intelligence. In combination with its precision industrial camera, characteristics are created that put it out of competition.

ConciergeEye is more extensive, faster and more precise than conventional Face Detector. ConciergeEye also has deception detection.

Can be used indoor and outdoor

ConciergeEye uses high quality manufactured components. You can use it in and outdoor use. Water and dust resistance is a matter of course.
